## IDX Download announcement

July 2007

### To Association/MLS Executives:

On July 26 multiple IDX property photos were made available to those offices using the FAR IDX Download service. Multiple photos have been available in our framed solution since inception and now multiple photos are also available to those offices that download our IDX data for their custom websites. The solution essentially consists of a dedicated web-based photo system to which users can link to the multiple IDX property photos. Two additional columns (PHOTO\_QUANTITY and PHOTO\_URL) have been added to the IDX data file and all of the details of how to use this new data to access the multiple photos are included in the "IDX\_ExportFileLayout.xls" spreadsheet that is included in the zip file downloaded by the user. We are encouraging implementation of this new method for accessing IDX photos as soon as possible as the current method of downloading zip files of photos will be discontinued. The specific date for the discontinuation of the photo zip FTP method will be announced at a later date. An e-mail will also be sent to those offices that have access to the FAR IDX Download service notifying them of this new feature. Users with questions can send an e-mail to [idx@living.net](mailto:idx@living.net) or call the FAR Technology Helpline at 407-587-1450.
